Revised guides show how to comply with new Building Regs and still cut construction costs

Kingspan Insulation, market leaders in 21st century insulation materials, has published, revised and updated editions of two highly popular guides that address the requirements of the revised Building Regulations and illustrate remarkable cost savings available to forward-thinking designers, installers and builders.

A 24-page clear and concise publication, 'Building Regulations for the conservation of Fuel and Power' examines the effect that the new regulations have had on methods of roof, wall and floor construction and the thickness of insulation materials required to achieve these new standards.

The second publication, 'Timber Frame Walls – Rethinking Construction' provides the case for using high performance zero ODP insulation rather than the conventional rock wool or glass fibre quilt/batt based solution to meet the requirements of ADL1 and L2 of the latest Building Regulations. High performance insulation can yield a saving of up to 37% over the additional cost of achieving the requirements using conventional solutions.

Copies of both guides can be obtained by contacting Kingspan Insulation Marketing Department on:
Tel: 01544 387 210 or Fax: 01544 387 299 or Email: literature.uk@insulation.kingspan.com
